

EN General instructions for commissioning and use of radio systems

 This document contains important notes and warnings, which may result in serious personal injury or damage to property.

 Please read the instructions carefully before commissioning the devices or after receipt of devices.

 The manufacturer is not liable for damages caused by improper or non-intended use, improper transport, storage or unauthorized changes or modifications of the customer to the device.

Scope of delivery

Devices according to enclosed delivery note.

Intended use

The manufacturer's radio systems are approved for general remote control applications (switching and control applications) without safety relevance.

Where certain safety requirements are required, they must be implemented by means of subordinate measures with approved equipment.

Safety instructions

 Before connecting, using and operating the device, please read the device-specific instructions carefully!

You will be able to download this file after logging in to the customer portal at the following URL: www.elseco.eu
If you do not have access to the customer portal or if you have forgotten the access data, please contact the manufacturer.

 The devices may only be used as described in the device-specific instructions. They may only be used undamaged and under the specified environmental conditions.

 Do not use in case of danger to life and limb or damage to property if you do not have visual contact to the application!

Installation and maintenance instructions

The housings may only be opened to connect the power supply and control cables or to change the battery. No other user-serviceable components are included. Further actions/changes require the consent of the manufacturer.

The electrical installation may only be carried out by an authorized electrician who has become familiar with the respective operating instructions.

All work on electrical systems may only be carried out by a qualified electrician or under their guidance or supervision.

Observe the applicable laws, standards and (safety) regulations as well as the manufacturers' instructions for the devices to be controlled! Let

EN General instructions for commissioning and use of radio systems

devices without function check by the manufacturer! Do not make any unauthorized changes or modifications to the device!

Function

The function is described in the device-specific instructions.

Commissioning

The radio system is generally configured and delivered fully functional. Individual components may still have to be installed and connected to an external power supply. You will find corresponding notes in the device-specific instructions.

 Make sure that no external voltage is present while the devices are being installed and connected.

Transport

Ensure that the devices are adequately protected against vibrations, moisture, dust and electrostatic discharges during transport or returns.

Storage

- do not store outdoors
- store dry and dust-free
- protect from direct sunlight
- do not expose to aggressive media
- avoid mechanical vibrations or shocks

Troubleshooting

- replace the battery(s); check the polarity and the exact type of battery and the correct voltage
- check the power supply
- check the function of radio receivers with additional radio transmitters (if available)
- check the function of radio transmitters with other radio receivers (if available)
- reduce the distance between radio transmitter and radio receiver
- check if other radio applications that use the same frequency range are operated nearby

Battery replacement

Make sure you are not electrostatically charged or take appropriate ESD protection measures.

Only use batteries of the same type and voltage. Observe the polarity of the battery(s).

Warranty

Within the statutory warranty period, defects of the device which are

EN General instructions for commissioning and use of radio systems

based on material or manufacturing defects are remedied free of charge by repair.

The warranty does not cover any defects resulting from improper transport, storage or use as well as non-intended use or unauthorized changes and modifications by the customer to the device.

Disposal

Do not dispose old or defective devices or single components in consumer waste, but take it to a collection point for proper disposal!

Unloaded or old batteries must be fed back to a collection point. Use public waste disposal authorities or containers with the GRS symbol.

Dispose packaging material in collection containers for cardboard, paper and plastics.

Service

If, despite proper handling and operation, faults occur or the unit has been damaged, please contact your dealer or the manufacturer.

Conformity

The elseco GmbH hereby declares, that the radio system supplied are in compliance with Directive 2014/53/EU when used as intended.

The full text of the EU declarations of conformity for each of the components are available at the following URL: www.elseco.eu

The products supplied are licensed for the territory of the European Union (EU) and Switzerland (CH).
